LabVIEW contains a comprehensive set of tools for acquiring, analyzing, displaying, and storing data, as well as tools to help you troubleshoot code you write. In LabVIEW, you build a user interface, or front panel, with controls and indicators. Controls are knobs, push buttons, dials, and other input mechanisms.

If you set up your user interface to intuitively guide the user through the motions of using your program, they will thank you for it. Also keep in mind that less is more when it comes to UI design, as you may have noticed from the flat and flat 2.0 design styles. Instead of making one cluttered interface, consider breaking controls and indicators into different groups to display on a tab ...
